Call for details. Based on health assessment. Limited time only. Results not typical. New patients only. Not valid with any other offer.

This weight reduction treatment includes the use of HCG, a drug which has not been approved by the FDA as safe and effective in the treatment of obesity or weight control. There is no substantial evidence that HCG increases weight loss beyond that resulting from caloric restriction, that it causes a more attractive or "normal" distribution of fat, or that it decreases the hunger and discomfort associated with caloric restricted diets.
